

CDW·G AND ISO 28000

FOR OUR CUSTOMERS: A NEW LEVEL OF SECURITY ACROSS THE SUPPLY CHAIN

For expanding workloads and mission-critical operations, safe, secure technology stands at the core of every organization. But security doesn't start at product deployment: It's an ongoing consideration that spans every stage from manufacturing to final delivery. And it's a critical consideration that CDW takes very seriously.

Security lapses such as counterfeit equipment, data breaches and information loss can result in massive fines, lawsuits and damaged reputations. With so much at stake, a higher level of industry security is a global necessity. That's why the International Standards Organization established ISO 28000 – and why CDW's certification in this standard is so important for every customer.

CDW AND ISO 28000: LEADERSHIP IN THE SECURITY SPACE

What is ISO 28000?

ISO 28000 is the first international standard to address end-to-end supply chain risks: exacting guidelines, requirements, recommendations and best practices designed to protect a company's employees, processes, assets, products and solutions throughout the supply chain. **And CDW is one of the top five companies in the U.S. to achieve this critical certification.**

A NEW LEVEL OF CONFIDENCE IN AN INSECURE WORLD

ISO 28000: A standard for end-to-end protection

Beyond guidelines for safeguarding a product's manufacturing, ISO 28000 enables plans, objectives, procedures, responsibilities and resources that harden security across the CDW supply chain:

- ➔ Enforces well-defined policies, processes and procedures that support workers, customers, and partners
- ➔ Identifies potential threats to the supply chain at every stage – and ensures security from purchase through configuration and delivery
- ➔ Manages risk and its consequences; minimizes disruptions to our operations and our customers
- ➔ Facilitates performance measurement, analysis and improvement of supply chain processes, solutions, products and customer satisfaction

What does ISO 28000 mean to you?

It means that CDW is a provider of products and solutions that you can trust. It means that you can be completely confident in anything you buy from us. And it means that you're protected by stringent, comprehensive security capabilities in everything.

What does participation say about CDW?

It's not enough for companies to claim that they follow security procedures – with ISO 28000, companies have to prove it. CDW's participation confirms our commitment to protecting what we sell: consistent, effective development and supply chain security practices firmly in place across the entire product lifecycle.

In addition, CDW processes and vendor relationships ensure a constant, reliable supply of secure products and services to maintain business continuity and prevent business disruptions.
