

Your secure governance platform for sharing your most sensitive enterprise content with the outside world

Accellion provides an integrated governance framework that allows organizations to securely share their most sensitive files and collaborate beyond their enterprise borders, with all the controls and audit details necessary to demonstrate compliance with rigorous industry and government regulations.

By providing a secure governance perimeter around your most sensitive content, whether it resides on-premise or in the cloud, you have full visibility, and therefore full control, of where your sensitive content is stored, who has access to it and what's being done with it.

Easily accessed from email, through the web, or on your mobile device, kiteworks integrates with your existing security infrastructure, as well as your enterprise applications and workflows, to deliver content securely and efficiently with auditable logs of all file activity.

Accellion's solution is built upon a foundation of security, governance, usability, integration and automation.

Security

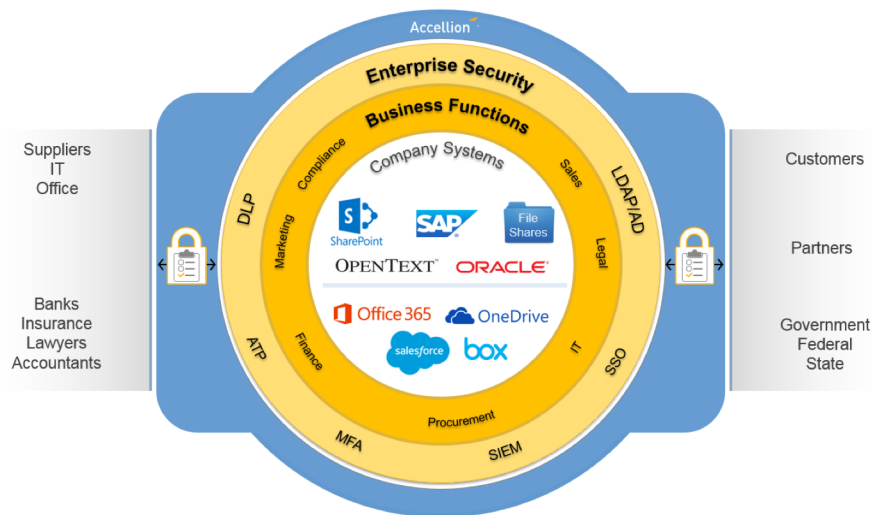

Accellion kiteworks is delivered as a hardened virtual appliance that can be deployed in your own datacenter, on your private AWS or Azure Infrastructure as a Service, or in a hybrid cloud model. Regardless of deployment model, you have sole ownership of the encryption keys, and therefore sole control of all of your content.

With kiteworks, you can leverage your existing security infrastructure investments with integrations into technologies like Single Sign-On and 2- or Multi-Factor Authentication; to DLP (Data Loss Prevention) and ATP (Advanced Threat Protection); and to the SIEM (Security Information and Event Management) and log analysis tools you use to monitor activity.

Governance

kiteworks addresses your critical governance requirements, both through certified compliance with FIPS 140-2, FedRAMP, and other standards; but also by providing the detailed audit logs needed to demonstrate compliance with industry regulations including HIPAA, FISMA and Sarbanes-Oxley. And role-based policy controls provide granular access privileges,

kiteworks establishes a secure governance perimeter around your most sensitive content, wherever it resides

Key Features

Security

- Hardened VM Appliance
- 100% on-prem, hybrid, cloud
- AES256 encryption, TLS 1.2
- Own Your Encryption Key
- Embedded AV
- Role-based permissions
- Enterprise security integrations: AD, DLP, SIEM, 2FA, ATP...

Governance

- Compliance controls and audit including: HIPAA, FIPS, GDPR, FedRAMP...
- Granular policy controls

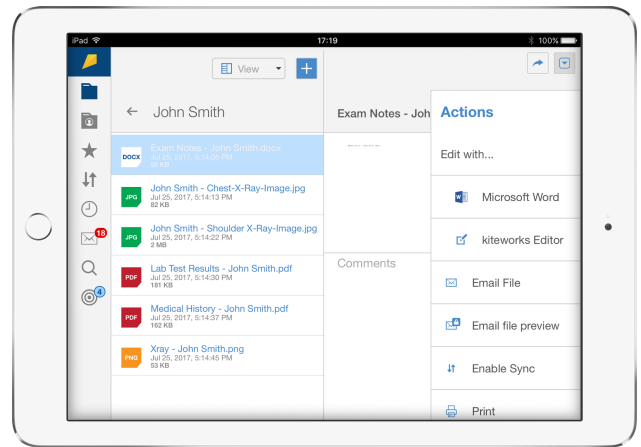

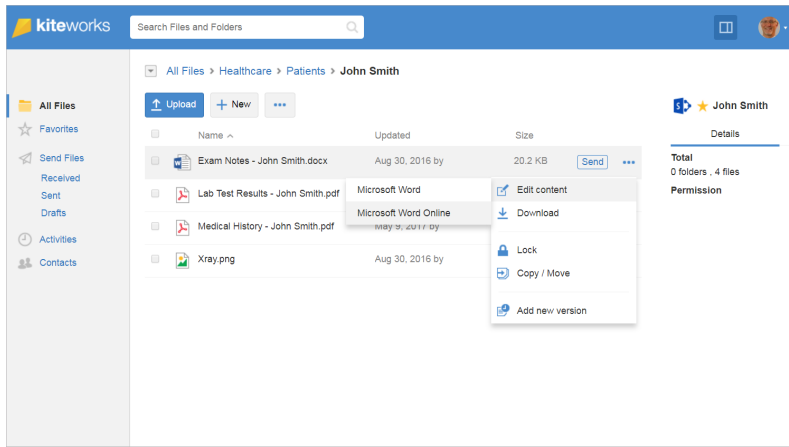

Usability

- Outlook Plug-in
- Intuitive Web App
- Office 365 seamless integration
- Office Mobile App integration
- Intuitive and consistent access to on-prem content stores

Integration & Automation

- SFTP, Automation Agent
- REST APIs
- Connectors to content:
- On-prem: SharePoint, File Shares, OpenText LiveLink, eDocs, Documentum
- SaaS: SharePoint Online, OneDrive for Business, Dropbox, Box, Google Drive

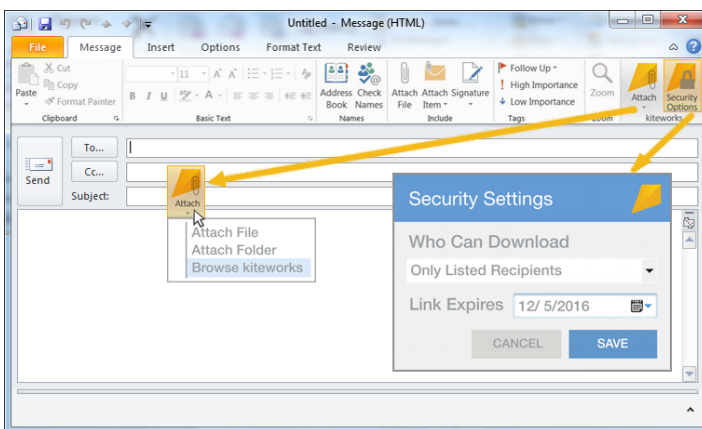

Simple access to enterprise content from the web, mobile and email

segregation of duties and the ability to meet the data sovereignty requirements of GDPR. Finally, comprehensive auditing and reporting provide complete visibility into where files are stored, who is accessing them, and what's being done with them: viewed, downloaded, edited, or shared, etc.

Automation & Integration

With connectors to popular ECM solutions located on-premise and in the public cloud, Kiteworks lets you keep your content where it belongs, but also find it easily from a single, universal interface. And no matter where it is stored, you have full visibility and control of your content, providing governance over all sharing activity.

Microsoft Outlook Plug-in

Usability

With secure plug-ins for Microsoft Outlook, as well as Microsoft Office 365 online or desktop products, users can easily send sensitive content via email with a single click, or collaborate using familiar applications and save updated versions directly to all connected repositories. Intuitive interfaces allow access from a web browser, or via mobile apps for iOS or Android devices.

Secure access to your content, no matter where it's stored

The Accellion Automation Agent, as well as support for SFTP, provides out-of-the-box options for automated business processes utilizing file transfer. An extensive REST-based API allows integration into core business applications such as ERP, CRM, or EHR systems. As a result, our customers and integration partners have developed workflows for secure file sharing within SAP, Oracle, Salesforce, and many other popular products, as well as for custom software developed in-house.

About Accellion

Accellion, Inc. enables enterprise organizations to securely connect all their content to the people and systems that are part of their critical business processes, regardless of the applications that create that content or where it is stored, while maintaining the controls and visibility needed to demonstrate compliance. Accellion's solutions are used by more than 15 million users and 2,500 of the world's leading corporations and government agencies including Procter & Gamble; KPMG; Kaiser Permanente; Latham & Watkins; National Park Service; Umpqua Bank; Cargill; and the National Institute for Standards and Technology (NIST).
