

5 Security and Efficiency Tools Every Hybrid Office 365 Enterprise Must Have

ABSTRACT

Microsoft's Jump to the cloud has left many of their enterprise customers searching for Enterprise Tools to streamline Hybrid Active Directory and Hybrid Office 365 Administration. Recent studies suggest that among Microsoft's Enterprise customers, a large portion plan a permanent hybrid deployment and about half say they will have a hybrid deployment for longer than three years. Without Enterprise tools in place, Security, Compliance and Efficiency goals are put at risk with the results being costly errors, fines and in some cases, breaches, exposure or theft of sensitive data.

5 Audit Hybrid AD/Office Operations with Analytics and Reporting

Gaining valuable understanding & insight into both on-premises and cloud assets is critical. Microsoft provides Secure Score to rank your security posture, but there are limitations. Last Login, Last Password Change, Group Memberships are all valuable in making management decisions on how best to maintain user accounts and groups.

4 Secure & Protect Hybrid Tasks with Least Privileged Delegation

Day-to-day administrators and Help Desk users will need to deal with Hybrid and end-user Self-Service capabilities that reduce service desk workloads while simultaneously improving the end user's experience. Cayosoft Administrator Self-Service empowers users to change passwords, reset forgotten passwords, unlock their accounts, manage groups and distribution lists, or subordinates themselves, without costly delays or expensive calls to the help desk.

3 Increase IT Efficiency with Automatic Hybrid User Provisioning

Automatically creating accounts from HR, ERP, SIS Data directly cuts out time consuming delays and the mistakes that are the results of manual error-prone operations. In Hybrid environments this becomes ever more critical because on-boarding accounts is more than twice as complex as with on-premises alone. Provisioning will likely touch on-premises AD, Exchange, Azure AD, and Office 365. The ideal solution should be affordable, deploy in one or two days and be able to be supported by existing staff.

2 Reduce Office 365 Licensing Errors and Costs with Automation

Manual license assignment is complicated and error prone, license changes can be even more painful. Assigning the wrong license or not revoking an unused license can cost as much as \$350 extra per user per year. With Automated License Assignment, organizational data such as department, location or even job title can be used to determine how licenses are distributed.

1 Improve IT Operations with Simplified Hybrid Management

Most administrative decisions are made based on a user's organizational or geographical details stored in Directory Attributes. Unfortunately, there are no built-in tool for maintaining this information and most 3rd party tools do not provide this capability.
