

1. Introduction to Jupyter
2. Data Preparation
 - a. Collecting and Describing Data
 - b. Exploring Data
3. Classification Models
 - a. Introduction to Classification Models
 - b. Introduction to Logistic Regression
 - c. Training Logistic Regression Models
 - d. Introduction to Overfitting
 - e. Using Cross Validation to Reduce Overfitting and Tune Predictive Models
 - f. Introduction to Decision Trees
 - g. Training Decision Tree Models
 - h. Testing Classification Models with Business Outcomes in Mind
4. Regression Models
 - a. Introduction to Regression Models and Linear Regression
 - b. Training Linear Regression Models and Preventing Overfitting
 - c. Testing Regression Models
 - d. Introduction to, and Training, Neural Networks Models
 - e. Introduction to, and Training, k-Nearest-Neighbors Models
