Microsoft

Veeam Management Pack for System Center

"Veeam MP lets CBRE Asia Pacific view its physical and virtual environments through a single pane of glass, which allows the IT team to see and resolve issues before they impact the business."

Darren Warner
Regional Director for
Infrastructure and Operations
CBRE Asia Pacific

"System administrators need the deep insights that Veeam Management Pack provides for both Hyper-V and vSphere environments."

Cameron Fuller,
System Center MVP for
Cloud and Datacenter,
a principal consultant
for Catapult Systems

Veeam® Management Pack™ (MP) v8 for System Center enables IT Teams to make informed technical and business decisions within heterogeneous data centers. Delivering app-to-metal management on both Microsoft Hyper-V and VMware vSphere layers, including monitoring, reporting and capacity planning for the Veeam Backup & Replication™ infrastructure—all from the Operations Manager console. Veeam Management Pack integrates fully with System Center, providing real-time data and deep visibility of the virtual and physical infrastructures and applications that run your business.
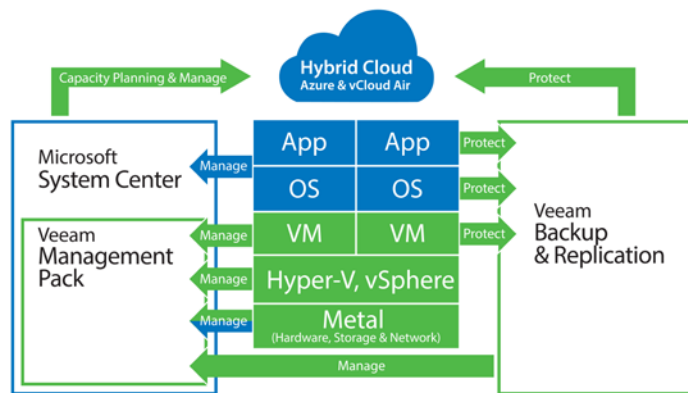

Multi-hypervisor management

As virtualization continues playing a larger role in IT strategies, System Center users are looking for efficient ways to monitor both physical and virtual infrastructures for popular hypervisors. Unified monitoring and management of both worlds is needed to maintain service levels and increase management efficiencies. Without an integrated solution, for example, vSphere performance remains a "blind spot" for many operations.

Veeam MP extends System Center, bringing together monitoring of virtual and physical infrastructures, applications and Veeam Backup & Replication for deep, app-to-metal visibility. As the demand to move on-premise VM workloads to Microsoft Azure as a cloud service grows, Veeam MP provides a unique Hybrid Cloud resource, capacity-planning tool to help you right-size and predict the resources you will need to power those workloads in the cloud, and Veeam MP, in conjunction with Veeam Backup & Replication, provides a fully integrated, fast and secure way to backup and restore from the cloud.

Together with System Center and Veeam Backup & Replication, Veeam MP provides app-to-metal visibility.

Benefits

Veeam MP helps IT managers, operations professionals and virtualization experts solve their key challenges to:

Find problems fast
- Drill down into storage, network and compute topology views for app-to-metal visibility
- See all of your critical infrastructure "at-a-glance" with Veeam Morning Coffee Dashboard™ & Report
- Link to a built-in knowledge base to identify and fix problems fast

Reduce downtime and meet SLAs
- Get live data with in-context dashboards and heatmaps with drill-down capabilities
- See relationships and dependencies to the root cause of problems
- Monitor VM health with correlated events and metrics right out of the box

Maximize System Center ROI
- Leverage your investment in Microsoft System Center to manage vSphere, including vSphere 6, and Hyper-V
- Manage virtual, physical and Veeam Backup environments all within the System Center console
- Right-size and optimize virtual resources

Ensure VMs are protected with
Veeam Backup & Replication
- Know which VMs have valid recovery points and identify unprotected VMs
- Show which VMs are restored by whom, when and where
- Track performance and status for backup copies

Take control of capacity planning
- See host failure models and predict CPU, memory and storage needs
- Optimize and right-size VMs for efficient resource use
- Analyze on-premises workloads to accurately forecast equivalent resources needed to migrate works to Microsoft Azure

Complete integration

Veeam MP integrates fully with System Center functionality — alerts, topology diagrams, dashboards, reporting, auditing, notifications, responses and automation — for all Hyper-V and vSphere management. And Veeam MP provides a detailed health model, including metrics such as memory pressure, disk pressure and disk IOPS, which are only available from Veeam.

Proven solution

Veeam MP has been verified by VMware as VMware Ready and is listed in Microsoft's Pinpoint System Center Marketplace.

Thousands of organizations worldwide rely on Veeam Management Pack for System Center to manage their physical and virtual environments and keep their business running smoothly.

Supported platforms

- Microsoft System Center 2012 SP1 and R2
- Microsoft Hyper-V Server 2012 and later
- Windows Server Hyper-V 2012 and later
- vSphere 4.1 and later (including vSphere 6)
- Veeam Backup & Replication v7 and later

Microsoft Technology Centers

Veeam is a member of Microsoft's Enterprise Cloud Alliance and a Global Microsoft Technology Center (MTC) Alliance Member
