Gridstore HyperConverged All-Flash Infrastructure Purpose-built for the Microsoft Cloud-Inspired Data Center

10X Performance 4X Lower TCO 10X Less Effort

Unique in the market, Gridstore delivers on the promise of an easy-to-deploy and manage, high-performance Private-Cloud-in-a-Box built on the Microsoft technology stack. Customers now have the ability to quickly, easily, and cost-effectively build their own private cloud infrastructures.

- Simple, turnkey system that is easy to deploy and manage
- Delivers Quality of Service (QoS) on a per-VM basis
- Start with as few as three nodes and expand to 256 and over 23PB of storage
- All-flash architecture for ultimate performance at a cost less than hybrid

Gridstore customers gain a 10X performance improvement over traditional storage as we put all-flash as close to the workload as possible. They realize 4X lower TCO by consolidation of three layers of infrastructure into one scalable layer built on X86 hardware and 10X less management effort due to less management points and less infrastructure to manage.
