

## Unified Identity Where You Want It

**C**entrify provides Unified Identity Services across the data center, cloud and mobile that results in one single login for users and one unified identity infrastructure for IT. Centrify's solutions reduce costs and increase agility and security by leveraging an organization's existing identity infrastructure to enable centralized authentication, access control, privilege management, policy enforcement and compliance.

Centrify provides tested support and turnkey integration with thousands of SaaS apps, complete mobile application management and on premise plug-ins for SAP NetWeaver, Java and web applications, and databases so

you can get SSO across cloud, mobile and on-premise applications from a single vendor.

With the Centrify User Service, you need not sacrifice control of your corporate identity. Already considered the innovative leader in leveraging Active Directory, Centrify integrates the Centrify Cloud Service with Active Directory without poking extra holes in your firewall or adding devices in your DMZ. And unlike other solutions, Centrify does not make the fundamental security mistake of duplicating AD into the cloud, maintaining your organization's identity inside Active Directory and under your control.

Why not try it for free today?
