

FREE: Connect Active Directory to Office 365

Since its launch in 2011, Microsoft Office 365 has quickly become the collaboration software of choice for many organizations. Most Office 365 customers are migrating from Exchange running on top of a Microsoft infrastructure with Active Directory (AD) as the main identity store. However, unlike Microsoft's on-premise applications, Office 365 is not natively integrated with AD. Thus, managing users and providing them seamless access become significant challenges to successful deployment and adoption. Okta Cloud Connect is a free cloud-based service that solves these challenges by integrating Office 365 and AD.

Getting Started

Deploy your free Okta instance now:
www.okta.com/Redmond

Single Sign-on & User Synchronization

Once integrated, Okta intelligently synchronizes users between AD and Office 365. Okta also leverages

Microsoft's Integrated Windows Authentication to seamlessly authenticate users into Office 365 when they've already logged in to their Windows domain.

Easy Configuration

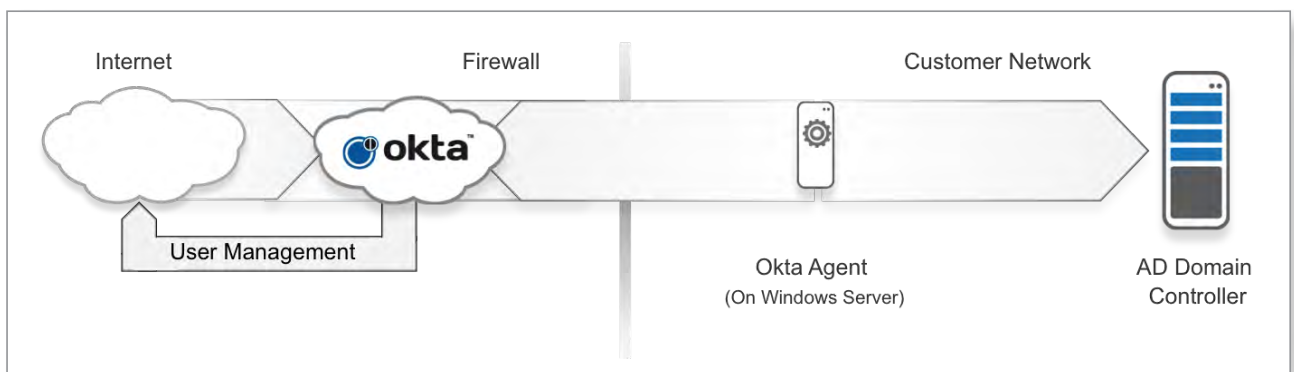

Deploying Okta with Office 365 is a simple, wizard driven process and we provide detailed documentation, training classes and live 1-on-1 office hours to ensure a successful deployment.

Enterprise-Grade Cloud Service

Okta's cloud-based service requires no servers and is trusted by thousands of customers. Read what our customers have to say about us at www.okta.com/customers

Free Forever, No Catches

Okta Cloud Connect is free for an unlimited number of users and has no time limits.
