

Improve Application Performance, Reduce Costs, and Increase Productivity for **Hybrid Enterprises**

“As Microsoft Azure works to erase the boundaries between cloud development and operational management, we look to partners like Riverbed to provide the application performance infrastructure that optimizes the end user’s experience when apps are delivered via the cloud.”

Garth Fort, General Manager of System Center and Virtualization, Microsoft

Riverbed is one of the first partners to join the new Microsoft Azure Certified program. SteelHead CX for IaaS Clouds was architected to be seamlessly deployed in Azure. The cool thing about SteelHead CX for IaaS is that you can spin up a cloud instance in the Azure cloud without worrying about the complexities of deploying an appliance. The combination of Riverbed SteelHead and Microsoft Azure allows customers to take advantage of the cost-savings and agility of the cloud, while optimizing and accelerating the delivery of applications from Azure to business locations up to 33x faster, while using up to 97% less bandwidth.
