

# User Provisioning Made Simple

**Zohno Tools** (Z-Hire and Z-Term) are a pair of user account tools that allow administrators to set up templates for different types of users and then quickly provision or terminate Active Directory user accounts, Exchange mailboxes, and Lync accounts; run custom scripts against AD or other systems; or create and terminate accounts on cloud services such as Office 365 and Salesforce. Templates can be configured with a multitude of options, enabling administrators to quickly provision users correctly and consistently.

Zohno works seamlessly  
across a variety of platforms

With Zohno, you can...

Create and manage  
account templates

for the cloud

or on-premises systems!
